INTELLIGENT SECURITY

INTRODUCTION

Our Intelligent Security solutions empower you to define access rules to your premises, ensuring the safety of yourself and your loved ones, without sacrificing anyone's comfort. Setup access rules for your premises; define temporary access conditions for parties, soirees and routine maintenance tasks, and even extend your access control system to your garage doors and gates. No matter how exacting your access control requirements are, our Intelligent Security solutions will ensure they are realized to your full satisfaction.

With our Intelligent Security solutions, businesses can also monitor employees and customers to protect themselves against fraudulent transactions, theft, shortages, burglaries, vandalism, and shop lifting. In addition, you can also monitor employee productivity; workman's compensation accidents and customer service to make sure the business is operating efficiently and to high standards.

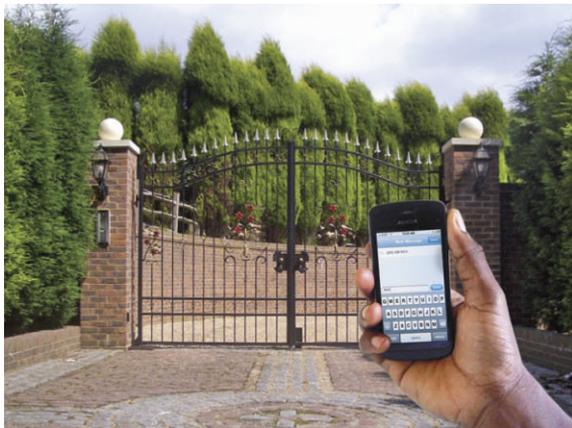

With our Intelligent Security solutions, you can use your mobile phone to monitor and control your assets and systems from any location, anytime. Its alarm facilities provide a flexible way to distribute critical alarm information to any number of mobile phone users.

Use Your Mobile Phone to Open Your Automatic Gate or Garage Doors

Most crimes, such as kidnapping, vehicle theft, and armed robbery, occur while you wait for your automatic gate to open. Don't be caught waiting! Open your automatic gate from your phone and just drive straight in!

The GSM Gate Opener incorporates a professional industrial grade GSM engine that receives calls, as any ordinary GSM phone. For example, if your SIM has a phone number 025 5555 555, that is the number you have to call to open the gate. The system has a memory where you will store the numbers of people enabled to open your gate (up to 250 people). When the Gate Opener receives a call, it will check the calling number and if the number is in the list you have prepared, it will reject the call and open the gate. This system can be used in gated communities, offices, and homes.

Once your number has been preset into the system you have direct access to open.

GSM Intercom for Gated Communities

In these days of high crime and burglary rates, it's not surprising that home security rates very highly on the list of what homeowners and residents feel is important when buying or renting a residence.

Gated communities and high-rise buildings are increasingly becoming popular these days due to the demand for high security. This means that developers and home owners need to factor in the cost of installing alarms and secured access systems when building or purchasing a place..

Our GSM Intercom can easily be adopted by old buildings; no wiring or chiseling involved, it is a reliable wireless solution.

The intercom is connected to mobile phones of home owners, therefore even in their absence, they can permit a visitor to enter.

Now visitors can only enter the community when the home owners give them permission to do so, and not at the discretion of security personnel.

GSM Intercom for Remote Communication Towers

Many communication towers are built at remote sites. Communication towers require semi-annual or annual maintenance service by contractors. Usually, workers have to drive for hours to the tower just to open the gate for contractors to perform maintenance service. This is a waste of human resources and time.

With IT, you can save time and money for this tedious job. Our system can be installed outside the gate with a connection to an intercom, enabling you to grant access to authorized persons from the comfort of your office or wherever you may find yourself using your phone.

When the maintenance workers complete the maintenance routine, they can again call the technician who can then lock up the premises remotely. Another feature is the ability to set the access time limit. For example, if the maintenance process takes 3 hours, the access can be preset to automatically lock up. In addition, it also serves as a basic alarm system. Using sensors, the system recognizes unauthorized access and will immediately inform the main office via phone.

Your staff do not have to accompany contracted persons to your cell site or remote site, authorization for entry can now be given from the comfort of your office

SMS Alert for High Voltage Electric Fencing Security System

High voltage electric fencing is the first line of defence, and enhances the ability to detect and respond to break-ins or intrusion immediately. This is to protect your property and ensure that intruders do not unlawfully enter your property. With our Intelligent Security system, an alarm will be raised immediately an intruder tries to cut through the electrified wires or compromises your fence.

Now the police, security men and you can now receive direct prompt on your mobile phone once your fence is tampered with or security is breached.

HD Spy Camera

This wall mountable spy camera secretly records what is happening in your home, at your work place, or at any remote site, and alerts you in real-time on your phone! To the ordinary person, this looks just like an ordinary light switch. What they don't know is that there is a high resolution spy camera with a pinhole lens hidden inside. It is one of the most effective spy products available.

The HD Spy looks and operates just like a light switch, so nobody knows it's around.

3G Camera

With our 3G camera, you can view what is happening in your home, at your work place, or at any remote site by making a single call to the camera from any location on your 3G phone. The 3G Camera offers you the freedom to view "LIVE" video images captured from installed cameras or CCTV system.

All this through your 3G Mobile phones, PDA's & Windows mobile devices anytime, anywhere. Using your mobile keypad, you can move the camera to two directions to reach more views.

You can watch live video feeds from your camera on your phone.

GSM Alert Magnetic Door / Window Alarm

Wouldn't it be nice if you got a text message telling you when an intruder has entered your home? Well, now it's possible! IT's GSM Alert Magnetic Door / Window Alarm does exactly that, using GSM technology and magnetic alarm contacts.

Simply insert a SIM card, install the Door Spy on a door or window, and when the door or window is opened or closed, it will send you, the police or your security personnel a text message! Powered by a high grade rechargeable lithium-ion battery, you'll get up to 150 hours (standby) of use per charge.

You can even keep track of the battery power level; just send the device a quick text and it will reply with battery power level information!

In the event of forceful entry, an sms alert will be sent to your phone, the police or your security personnel.

GSM Wired Home Alarm System

Using your mobile phone, you can arm, disarm or activate the alarm remotely. You can control alarm via text message and receive confirmation. You can receive text and call of any alarm activity while away. It is possible to use the alarm input of the unit to trigger SMS alerts in the event of a break-in or alarm event.

The unit can send the alerts to a maximum of 20 mobile phones at one time. For example, security personnel may be alerted in the event of a break-in.

It is possible to use the alarm input of the unit to trigger text alert in the event of a break - in or alarm event. The unit can send alerts to a maximum of 20 phones at one time.

Lighting and Locks Control

The system is designed to be extremely simple and, once the customer's or user's telephone numbers are programmed into the system, will enable up to 8 authorized users to switch the lights or lock on or off, as and when necessary. Thus, no matter where the user is located in the world he can control his lights or locks.

Emergency Panic Button / Alert

Our Emergency Panic Button / Alert is designed to assist in alerting up to 8 pre-programmed phone numbers in emergency situations where a threat to persons or property exists. These phone numbers can include security, police or emergency services, nannies, parents or guardians.

Applications:

Can also be used in homes, where it alerts someone inside the house, in case of an emergency. With this solution, patients, the elderly and even toddlers and young children can be monitored even when you are miles away.

Can also be used in convenience stores, gas stations, or other establishments staffed with a single employee during late hours. The button can be pressed in times of distress (Such as robbery or threatening behavior, or a situation which may warrant assistance), triggering a silent alarm.

Can be worn by elderly individuals in order to maintain their independence outside of an Aged Care Facility, while still affording them a means of summoning help should they require it (i.e. a medical emergency that renders them immobile, like a fall, injury or illness). It can be fitted as either a pendant or bracelet to be worn by the user.

Our Emergency Panic Button / Alert is a simple plug and play device that is very easy to install without requiring much set up. The system works on a GSM platform and only a SIM card from a mobile telephone service provider is required to start the service; no landline application and installation is required. As the Emergency Panic Button / Alert is essentially an alarm system, it is also equipped with a remote alarm control system, making it possible to activate and deactivate the unit remotely via text messaging / SMS or via phone call.

For existing premises with landline, the unit can also be connected to the landline for activation. The use of the wireless SIM card offers an additional level of risk management in the event that the landline is deactivated or cut for any reason.
